	Tilliotity 5. Rugel	1790				
The MAILING DATE of this communication appe	ars on the cover sheet with the o	correspondence add	ress			
THE REPLY FILED 13 May 2009 FAILS TO PLACE THIS APPI	LICATION IN CONDITION FOR AL	LOWANCE.				
☑ The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 1.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:						
<ul> <li>a) The period for reply expiresmonths from the mailing</li> </ul>						
b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.						
Examiner Note: If box 1 is checked, check either box (a) or ( MONTHS OF THE FINAL REJECTION. See MPEP 706.07(I	).					
Extensions of time may be obtained under 37 CFR 1.136(a). The date have been filled is the date for purposes of determining the period of ext under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the set set forth in (b) above, if checked. Any reply received by the Office later may reduce any earned patient term adjustment. See 37 CFR 1.704(b). NOTICE OF APPEAL.	ension and the corresponding amount of hortened statutory period for reply origing than three months after the mailing date	of the fee. 	Primary Examiner, Art U	uur 1490				

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments have been fully considered but are not persuasive.

Applicant argues that US Patent 5,600,044 (Colle '044) teaches that acrylamides absent an NH2 group are effective hydrate inhibitors and that compositions comprising those having an NH2 group, such as PAM, perform worse than the uninhibited composition, pointing to the results of Table 1 of Colle '044.

It is first noted that no standing rejection relies upon Colle '044 and therefore its teachings of preferred polymers is only material in the results shown between various acrylamides.

Second, it is the examiner's position that applicant has misinterpreted the results of Table 1. Under the Mini-Loop Sub-Cooling portion of the table, it is the examiner's position that no test was done with PAM-the PM2 containing polymer that applicant asserts is that taught by US Patent 4.027.607 (Schiller), which is relied upon in the standing rejections-since both the "Conc. Wt%" and "Mini-Loop Sub-Cooling Temp. (F)" contains a dash, which the examiner has taken to mean no test was performed.

Further, it is noted that the PAM scored a 10 on the Ball Stop Time test, which is better than the 6 that resulted from the control group. The examiner interprets this as showing that the PAM does have at least some inhibitive properties and therefore would meet the instant claims.
